

ZEISS

PhotoFusion® by ZEISS

Fast Dark. Fast Clear.

PhotoFusion® by ZEISS Fast self-tinting lenses.

Eyeglasses that adjust to any light condition – full sunlight, indoor lighting and everything in between. PhotoFusion® by ZEISS lenses do it all – and do it fast.

Fast darkening. Fast fade back.

PhotoFusion polycarbonate and high-index lenses darken up to 20% faster and fade back up to two times as fast* as previous photochromic lenses offered by ZEISS.

Very clear indoors. Very dark in sunlight.

PhotoFusion by ZEISS lenses offer excellent vision under all lighting conditions.

- Indoors, and outdoors at night, they remain clear.
- Outdoors on cloudy days, they respond to reduced solar UV rays and turn semi-dark.
- In full sunshine the lenses are hit with the full intensity of the sun's rays, and they darken to a true sunglass tint.

100% solar UV protection for your eyes.

No matter how dark or clear they are, PhotoFusion by ZEISS lenses always block 100% of harmful solar UV rays. Your eyes will not only be comfortable in all lighting conditions, they'll be fully protected.

PhotoFusion by ZEISS is available in gray and brown tints.

*Average performance. Performance will vary by material, temperature and light conditions.
