

The moment you can do your best work because your eyes are relaxed.
ZEISS OfficeLens

Problem: other lenses create ergonomic issues

Digital Eye Strain affects millions of people every day. Are you one of them?

Do you use a computer or digital device more than two hours per day?
 Do you suffer from dry or tired eyes, head, neck or back pain during these activities?

If so, you may be suffering from Digital Eye Strain. Now there is an eyeglass lens that can help your eyes stay comfortable at a computer and in other up-close activities: **ZEISS OfficeLens**.

The right tool for the task.

Digital Eye Strain is often the result of wearing lenses with inadequate intermediate vision, which is vital for computer work. Digital Eye Strain results not only in eye problems but can also impact other parts of the body.

Solution: ZEISS OfficeLens

Reading Lenses offer no intermediate vision.

Result: Wearers lean in toward the screen to see clearly, creating an unnecessary strain to neck and back.

General-purpose Progressive Lenses offer a narrow intermediate located below eye level.

Result: Wearers lift their heads to view the screen, causing a strained neck and shoulder muscles.

Unlike reading lenses or ordinary progressives, ZEISS OfficeLens is designed specifically to solve this problem.

Solution: ZEISS OfficeLens

This provides a wide, ergonomically positioned lens for near and intermediate use. Wearers maintain a natural posture for complete comfort all day long.

ZEISS OfficeLens lets you personalize your vision based on your needs.

Your eye care professional will help you choose which of these working distance options is right for you:

Not just for computers.

ZEISS Officelens provides clearer, more comfortable vision for any other near and intermediate activities like cooking, gardening, or gaming.

Make your life easier

Put an end to Digital Eye Strain and get clear, relaxed vision all day long.
